ROHIT SINGH

Full-Stack Software Developer | R&D Engineer | AI-Assisted Development

itsrohitsingh31@gmail.com | +91-8240275783 | linkedin.com/in/rohit-singh-ml31 | New Delhi – 110003 / Kolkata – 700059

PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Developer with 5+ years of hands-on experience architecting, developing, and deploying scalable web applications across real estate ERP, cargo logistics and revenue management domains. Proficient in Angular 18, ASP.NET Core 8, C#, Microsoft SQL Server, and MongoDB, with a strong command of RESTful API design, component-driven front-end architecture, and relational and SQL database optimization. Experienced in AI-assisted development workflows using Claude Code and Claude Chat to accelerate user story implementation, automate code scaffolding, and resolve production defects with greater velocity. Adept at translating complex business requirements into maintainable, high-performance solutions. Proven ability to thrive in fast-paced R&D and product engineering environments while collaborating effectively across cross-functional teams.

TECHNICAL SKILLS

Front-End Development: Angular 18 (Standalone Components, Reactive Forms, RxJS, Lazy Loading, Angular Router), JavaScript (ES6+), jQuery, React JS (Hooks, Functional Components, State Management), HTML5, CSS, Bootstrap

Back-End Development: ASP.NET Core 8, C# (.NET), RESTful API Design and Integration, Clean Architecture, Dependency Injection, Middleware Configuration, OOP Principles, SOLID Design Patterns

Database & Data Management: Microsoft SQL Server (SSMS, Stored Procedures, Query Optimization), MongoDB (Document Modelling, Aggregation Pipelines), MySQL, PhpMyAdmin

AI / LLM-Assisted Development: Claude Code (agentic CLI for autonomous multi-file code generation, refactoring, and feature scaffolding), Claude Chat (prompt engineering, context-aware debugging, architecture review, code walkthrough), LLM-driven user story implementation, AI-accelerated bug resolution and test generation

Data Science & Machine Learning: Python, Time Series Analysis (TSA), ARIMA, AR, MA models, ACF/PACF analysis, ADF/KPSS stationarity testing, NLP (Bag-of-Words model), statsmodels, SciPy, pandas, scikit-learn (SK-Learn)

Tools, DevOps & Practices: Git (Version Control, Branching, Merge Conflict Resolution), Microsoft TFS, Chrome DevTools (Performance Profiling, Network Debugging), Agile/Scrum Methodology, Software Architecture Design, Cross-Browser Compatibility Testing.

WORK EXPERIENCE

Full-Stack Software Developer | Gamut Infosystem Pvt. Limited Kolkata | Mar 2025 – Present

Real Estate ERP – Property Management System | Angular 18 + ASP.NET Core 8 + SSMS + MongoDB

- Engineered end-to-end features for a large-scale Real Estate ERP platform managing property acquisitions, leasing workflows, tenant lifecycle, maintenance ticketing, and financial reporting across multi-branch environments.
- Architected reusable Angular 18 standalone components with reactive forms, RxJS observables, and lazy-loaded feature modules, improving application load performance and component maintainability.
- Developed and integrated RESTful APIs in ASP.NET Core 8 (C#) following clean architecture and SOLID principles; implemented dual-database strategy using Microsoft SQL Server (SSMS) for transactional data and MongoDB for flexible document storage.

- Utilized Claude Code (AI-assisted agentic CLI) to autonomously generate boilerplate, scaffold Angular modules, and implement user stories from ticket descriptions, accelerating sprint delivery velocity.
- Identified, debugged, and resolved critical live production defects in the Property Management System using Chrome DevTools and server-side logging, restoring system stability and minimizing downtime.
- Participated in agile sprint planning, collaborated with product owners and QA engineers to refine acceptance criteria, and delivered features aligned with business objectives and compliance requirements.

Software Developer – R&D Engineer | CargoFlash Gurgaon | Jul 2020 – Feb 2025 (4 Years 7 Months)

OctoGen – Cargo Management Platform | Angular 18 + ASP.NET + MS SQL Server | 2 Years 3 Months

- Architected and built OctoGen from the ground up using Angular 18, ASP.NET, and Microsoft SQL Server, delivering a full-featured cargo operations platform that streamlined booking, tracking, and reporting workflows.
- Designed modular Angular 18 feature modules with reactive forms, route guards, interceptors, and service-based architecture, resulting in a highly maintainable and extensible codebase.
- Authored optimized T-SQL stored procedures, indexed views, and query plans in MS SQL Server to support high-concurrency transaction processing with minimal latency.
- Collaborated closely with domain experts to incorporate cargo industry business logic into scalable application architecture, ensuring compliance with operational requirements.

nGen D2D – Door-to-Door Delivery System | jQuery + ASP.NET Core + SQL Server | 1 Year 2 Months

- Developed the nGen D2D last-mile delivery management system, enabling real-time shipment tracking, route assignment, and delivery confirmation workflows for ground operations teams.
- Integrated ASP.NET Core Web APIs with a jQuery/AJAX-driven front end, reducing full-page reloads and improving operational throughput for field dispatchers.
- Designed relational database schemas and wrote parameterized SQL queries to ensure data integrity and prevent injection vulnerabilities.

nGen RMS – Revenue Management System | React JS + C# MVC + MS SQL Server | 1 Year

- Built a dynamic Revenue Management System using React JS and C# MVC to automate yield pricing, capacity allocation, and revenue performance reporting for airline cargo.
- Implemented reusable React functional components with hooks and RESTful API integrations, enabling real-time revenue dashboards consumed by business analysts.
- Optimized complex SQL queries and introduced stored procedures for revenue aggregation, reducing report generation time significantly.

Trainee – ML Developer | Cignex Datamatics Ahmedabad | Jan 2020 – Jun 2020 (6 Months)

- Conducted exploratory data analysis and time series modelling using Python libraries including statsmodels, SciPy, and pandas to identify seasonal trends and forecast patterns.
- Applied Autocorrelation Function (ACF), Partial Autocorrelation Function (PACF), Augmented Dickey-Fuller (ADF), and KPSS tests for stationarity validation and ARIMA parameter estimation.
- Developed and evaluated AR, MA, and ARIMA forecasting models; implemented a Natural Language Processing (NLP) pipeline using the Bag-of-Words (BoW) model for document classification tasks.

Intern – Web Developer | TATA Technologies Pvt. Ltd. Jamshedpur | Jun 2019 – Jul 2019 (1 Month)

- Developed a web-based internal tool using PHP, MySQL, and JavaScript within a XAMPP local development environment, automating manual data entry workflows.

- Designed and managed relational database schemas using MySQL and PhpMyAdmin, including table creation, indexing, and SQL query writing for data administration tasks.

PERSONAL PROJECTS

Bitcoin Price Forecasting – Time Series Analysis | Python, statsmodels, ARIMA Apr 2020 – Jun 2020

- Designed and implemented a multi-model forecasting pipeline using AR, MA, and ARIMA models to predict short-term Bitcoin price movements based on historical OHLCV data.
- Performed data preprocessing, rolling-window stationarity tests (ADF, KPSS), and hyperparameter tuning via ACF/PACF plots; validated model accuracy using RMSE and MAE evaluation metrics.
- Demonstrated applied expertise in financial time series forecasting and statistical modelling using Python, statsmodels, and pandas.

Anti-Diabetic Drug Sales Prediction – Time Series Analysis | Python, MA Model Feb 2020 – Apr 2020

- Built a sales demand forecasting model for anti-diabetic pharmaceutical products using the Moving Average (MA) model to capture short-term trend patterns in monthly sales data.
- Conducted end-to-end data pipeline including ingestion, cleaning, ACF/PACF-based parameter selection, stationarity validation, and model evaluation using statsmodels and SciPy.
- Delivered actionable demand forecast outputs applicable to supply chain planning and inventory optimization use cases in the healthcare domain.

Asset Management System | PHP, MySQL, JavaScript, XAMPP Jun 2019 – Jul 2019

- Designed and developed a full-stack web-based Asset Management System enabling CRUD operations for organizational hardware and software asset tracking.
- Implemented a MySQL relational database with normalized schemas; used PhpMyAdmin for database administration and PHP server-side scripting for dynamic page rendering.
- Built an interactive front-end using HTML5, CSS3, and JavaScript with client-side validation for form inputs, improving data quality and user experience.

EDUCATION

B.Tech – Information Technology | MCKV Institute of Engineering (MAKAUT) 2016 – 2020 | DGPA: 7.42

Higher Secondary (Class XII) | Tantia High School, WBCHSE 2013 – 2015 | 68.4%

Matriculation (Class X) | Gyan Bharati Vidyapith, WBBSE 2011 – 2013 | 78.4%

CERTIFICATIONS & ACHIEVEMENTS

- Internship Completion Certificate – TATA Technologies Pvt. Ltd., Jamshedpur (Jun–Jul 2019)
- QEEE Course in C Programming & Data Structures – IIT Mumbai (Jun–Sep 2017)
- QEEE Course in Chemistry – IIT Kharagpur (Jan–Apr 2017)
- Advanced Excel Training – Nov 2017
- MATLAB Training – May–Jun 2017
- Inter-College Champion – Counter Strike 1.6 Tournament (Jan 2019)
- Brown Belt – Japanese Shotokan Karate Association
